Tel: +386 30 467 000
armanov.com

INSTALLATION

To install Equalizer, first (1) hand tighten the attached nut.

Then (2) screw the compensator onto the barrel thread and align it either vertical or to your preference.

When in desired position, (3) tighten the nut using two wrenches counter-clockwise against the barrel.

CLEANING

We recommend cleaning chambers of carbon and other residue after every shooting session or after maximum 500 rounds.

Clean them using supplied custom scrapers which fit all chambers tightly.
